### Work Sample- Making a PowerPoint about Hardware

In Freshman year of Computer Information Technology, I got educated about hardware, an essential part to the IT Field. First of all, I googled information on my specific pieces of hardware, heat sinks and graphic cards. Then, my group and I created a PowerPoint based on what I learned. Lastly, our group presented the PowerPoint and explained the data that wasn't present on the slides. All in all, I had decent time learning about what is inside a computer.

First of all, I analyzed information about heat sinks and found out so much about them. For example, heat sinks are manufactured out of copper or aluminum alloys. I then learned about graphic cards in the same manner as I did about heat sinks.

I found out graphic cards are printed circuit boards (PCBs) that sends pixels to display and provide specific type of processing

[Research Information on a Microsoft Word Document.](#)

using graphical progressing unit (GPU). Then, my associates alongside me copied the information onto a Microsoft Word Document for a reference to later for our demonstration.

This was an essential step to pulling the entire project together.

When we got all of our information, I needed to find out how to present this newly found

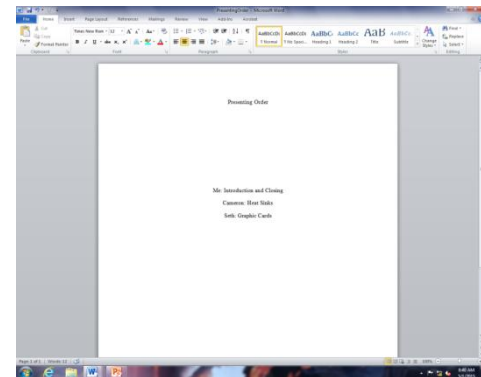

Example Slide about Stores to Purchase Graphic Cards.

data. Logically, we collected all the information we needed and started a new PowerPoint called “Hardware- Heat Sinks and Graphic Cards”. To create a basic background for the information to be presented on, I applied a basic Grid theme to all slides under the “Design” and added a textured background style behind the grids. Lastly, I constructed ten slides with my group with everything we learned and supported with faded

transitions between each slide and animation that is mature enough to present our data formally.

After our PowerPoint was completed, we presented it to our CIT class. First, we organized an order and system on how we were going to present. After that, I practiced with my group speaking clearly and efficiently. Lastly, after we had enough practice to feel confident, our assembly exhibited our information to the entire class in a presentation, resulting in a perfect grade because of our valiant efforts.

Organized Order for Our Presentation.

The skills I learned while doing this may give me a higher advantage over others. We studied about heat sinks and graphic cards at the very beginning. We then conceived a PowerPoint based on the facts that we investigated for. Lastly, we bestowed our knowledge to the class. This is some proof of my knowledge on finding data and presenting it formally to others.
